THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issued on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

REASONS FOR ALLOWANCE

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 02/28/08 and 08/14/06 has been considered by the examiner.

Allowable Subject Matter

2. Claims 1-10 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record either singularly or in combination fails to teach a method of optimizing scheduling in a communications network of CDMA type wherein an analysis device is positioned to detect base stations and wherein for each base station estimating the propagation channel, $h(0,s) \dots h(L-1,s)$, with L the length of the propagation channel, estimating the received powers and determining the base station of the highest levels and wherein a reception filter is implemented for each base station of the group of active base station, where each slots and antenna configuration are estimated the signal to interference ratio and determining the services that can be ensured by comparing with the threshold values dependent on each type of service.

Raghavan et al. (US Patent 6128500) discloses a method of optimizing scheduling in a communications network of CDMA type, wherein Raghavan discloses positioning an analysis device for detecting the base stations received at a measurement point as well as disclosing estimating the received powers for all detected base stations and determining the base station of the highest levels as well as disclosing a minimum signal to noise ratio wherein the pilot power observed needs to be above a minimum acceptable threshold. However, Raghavan et al. fails to teach for each base station estimating the propagation channel, $h(0,s) \dots h(L-1,s)$, with L the length of the propagation channel and a reception filter is implemented for each base station of the group of active base station.

Ghosh (US Patent 5991285) discloses a CDMA communication system providing a plurality of communication type services wherein an analysis device detects the base stations received at a measurement point and estimating the received powers for all the detected base stations as well as determining the base station of highest levels and estimating for each slots a signal to interference ratio and determining the services that can be ensured by comparing with the threshold values dependent on each type of service. However, Ghosh fails to teach for each base station estimating the propagation channel, $h(0,s) \dots h(L-1,s)$, with L the length of the propagation channel and a reception filter is implemented for each base station of the group of active base station.

Rappaport et al. (US Patent Publication 2004/0259554) discloses a system and method for efficient ray tracing propagation prediction and analysis of site specific model within a communication system wherein Rappaport et al. discloses positioning an

analysis device for detecting the base stations received at a measurement point and estimating and measuring the length of the propagation channel as well as estimating the received powers for the detected base stations and determining the base stations of the highest levels as well as estimating signal to noise ratios and determining services that can be ensured by comparing with the threshold values dependent on each type of services. However, Rappaport et al. fails to teach for each base station estimating the propagation channel, $h(0,s) \dots h(L-1,s)$, with L the length of the propagation channel and a reception filter is implemented for each base station of the group of active base station.

The prior art of record fails to teach claimed limitations of for each base station estimating the propagation channel, $h(0,s) \dots h(L-1,s)$, with L the length of the propagation channel. As well as failing to teach a reception filter implemented for each base station of the group of active base stations. The prior art of record either singularly or in combination fails to teach the above claimed limitations for claim 1 and is therefore the reason for allowance. Claims 2-10 are dependent on claim 1 and is therefore allowed under the same reasons set forth above.
